DISPOSABLE GLOVES MADE WITH GREEN ENERGY

ANSELL BANGKOK AT A GLANCE

Our manufacturing facility in Bangkok, Thailand produces these best-selling TouchNTuff® gloves using renewable resources.

Our range of best-selling products

TouchNTuff® 92-600

Unparalleled combination of chemical splash protection, comfort and durability

TouchNTuff® 92-605

Long cuff version providing unparalleled combination of chemical splash protection, comfort and durability

TouchNTuff® 92-675

Disposable nitrile gloves that offer robust protection for food processing and heavy-duty jobs

ENERGY AND EMISSIONS

In our Bangkok manufacturing facility, we are generating thermal energy with **biomass**, using wood chips to create heat. This has reduced our consumption of natural gas resulting in the reduction of 40,000 MTCO2e from our greenhouse gas (GHG) inventory.

A portion of the electricity used in Ansell Bangkok is also generated by our advanced and ever-expanding **solar photovoltaic installations**, reducing electricity costs and GHG emissions.

WASTE MINIMALISATION

Zero Waste to Landfill is part of a comprehensive strategy to review existing practices and limit waste generation directly at its source, while enhancing operational efficiency and implementing end-of-life solutions for materials and inputs.

Our Bangkok manufacturing facility is a certified Zero Waste to Landfill facility, in line with Intertek's Zero Waste to Landfill framework which looks at above 99% diversion.

WATER

Wastewater at our Bangkok manufacturing facility is pre-treated in our effluent treatment plant before being fed into the newly installed **Reverse Osmosis (RO)** plant. Here, treated water is drawn under pressure through semipermeable membranes and the concentrate (waste) stream is processed again as part of the multi-stage system to remove contaminants and increase the amount of water recovered for re-use. This project contributes towards the achievement of Ansell's water stewardship commitments.

PACKAGING

Our dispensers and cartons are made with at least 70% **recycled paperboard**. We've sourced packaging that includes recycled paperboard content as part of our ongoing commitment to sustainability.

Our dispensers and cartons are recyclable. We do not include any additional packaging components and we avoid printed Instructions for Use (IFUs) whenever possible.

Thinking of people and planet first
