

GLOVES ARE NOT A REPLACEMENT FOR HAND HYGIENE

EVEN WHEN GLOVES WERE WORN, 30% OF HEALTHCARE WORKERS WERE FOUND TO HAVE BACTERIA ON THEIR HANDS AFTER PATIENT CONTACT⁽¹⁾

HAND HYGIENE SHOULD BE PERFORMED:

Figure 1: World Health Organization Recommendations

To reduce Healthcare Workers' Risks, Hand Hygiene Practices after glove removal is recommended by:

- ✓ Centre for Disease Control and Prevention (CDC, 2011)
- ✓ World Health Organization (WHO, 2009)

To improve your hand hygiene compliance please contact your Ansell Representative or visit www.ansellcares.com
