

# Net 0 by 2045 Scope 1, 2 & 3.

## How is Ansell Achieving Net Zero Emissions? - FAQ

### 1. What is Net Zero, and what has Ansell committed to?

Net Zero means balancing any greenhouse gas (GHG) emissions we produce with those we remove or offset so that our impact on the climate is effectively zero. In 2022, we set a target of reaching Net Zero in Scope 1 and 2 emissions by 2040. Scope 1 emissions are those produced directly from our own operations, whereas Scope 2 emissions are those that come indirectly from the energy we use.

### 2. What progress has Ansell made since announcing its target for Scope 1 and 2 emissions in 2022?

Since setting our target in 2022, we've taken big steps forward and have documented our progress in our annual Sustainability Reports.

We've committed to setting near-term, company-wide emission reductions in line with climate science with the Science-Based Targets initiative (SBTi). We've also expanded our Net Zero ambitions to include Scope 3 emissions, which covers our entire value chain, and this new net-zero target has been approved by the SBTi.

### 3. What carbon reduction projects has Ansell implemented?

We've implemented several projects to reduce our emissions, including installing biomass hot water generators powered by renewable fuel, and solar panels that generate renewable energy, at plants in Sri Lanka and Thailand. We're also implementing best practice energy management standards throughout our operations: seven of our fourteen plants are now certified to ISO 50001, an internationally recognized standard for energy management systems. We reached 50% renewables in our total energy mix in FY 2025, helped by the fact that 58% of electricity used in our plants is renewable and nine out of fourteen Ansell plants use 100% renewable energy. Finally, in absolute terms, we lowered our Scope 1 and 2 emissions from 250,784 tCO<sub>2</sub>e in FY24 to 227,904 tCO<sub>2</sub>e in FY25.

### 4. How are Ansell's reported emissions verified?

Our Scope 1 and 2 emissions, which come from our operations, are verified in accordance with ISO 14064. We account for all activity-based emissions within our operational control, and these are independently audited on an annual basis by Control Union, an external verification body.

### 5. What are Scope 3 emissions, and why do they matter?

Scope 3 emissions are indirect GHG emissions that occur within a company's entire value chain. They include emissions from the materials we buy and how our products are:

- Transported
- Used by customers
- Disposed of after use

Scope 3 emissions make up the majority of our climate impact, so factoring them into our net-zero targets is essential.

## How is Ansell Achieving Net Zero Emissions? - FAQ

### 6. Can you explain Ansell's Net-Zero target timelines?

For our own operations, our target is still to reduce 90% of our Scope 1 and 2 emissions by FY 2040. Scope 3 emissions are much broader and more complex: they involve our suppliers, logistics partners, distributors, and even how our products are used and disposed of by customers. Because of this, we've updated our net-zero target year for Scope 3 emissions to FY 2045 in line with science, ambition and responsibility.

### 7. How is Ansell planning to achieve its 'Net Zero by 2045' target?

To meet this ambitious target, we're taking action across several key areas:

- Improving energy efficiency across operations and maintaining ISO-certified energy management systems
- Transitioning to renewable energy in all owned and controlled sites
- Engaging with suppliers to encourage them to set SBTi-validated targets
- Innovating to make more sustainable products, including using environmentally lower-impact materials
- Implementing product end-of-life and recycling initiatives
- Maximizing transparency through robust reporting and clear accountability

### 8. How does Ansell track and report progress on their SBTi-validated targets?

As a company whose net-zero targets have been approved by the SBTi, we're committed to measuring and reporting progress against targets. Our emissions-related performance is verified using standards such as ISO 14064 and then published annually in our Annual Reports and Sustainability Reports.

### 9. How do Ansell's actions help customers reduce their own carbon footprints?

When we reduce our emissions, especially in Scope 3, we also reduce the emissions embedded in the products our customers buy from us. This means that our climate action directly supports our customers' sustainability goals, helping them to reduce their emissions and strengthen their own net-zero plans.

### 10. How else is Ansell showing leadership in climate action?

We're aligning with global initiatives such as the SBTi, RE100 (a commitment to 100% renewable energy), and EP100 (a commitment to measuring and reporting on energy efficiency improvements). Our approach to sustainability is more than compliance; we're leading by example, setting ambitious targets and taking action.

## Thinking of people and planet first.

For over 130 years, Ansell has been protecting people, and our ambitions today are stronger than ever. By setting ourselves ambitious goals on protecting our environment, we seek to break new ground. With increased sustainability and ever smarter, more connected PPE, we strive to ensure the safety of workers and the environment we live in.
